BAKERSFIELD, CALIFORNIA, JUNE 6, 1935

NO. 15

## Agriculturists of B.J.C. Get Dollars And Knowledge

Profits estimated as high as \$50,000 will be made this year by Bakersfield agriculture students who have taken advantage of school facilities, according to H. K. Dickson, head of the Agriculture department. Besides money derived from sales of crops and stock, from \$1500 to \$2000 is taken in as prize money at each of several agriculture shows held annually.

For the first time in fifteen years Bakersfield now has a farm laboratory where students can gain practical experience with school credit. This farm is the only one of its kind in the state. Because of their reputation for honesty, local banks have financed student farmers by making loans amounting to nearly \$15,000.

The financial success of the students has depended a great deal on the cooperative organization they have formed to advertise and sell their products throughout the southwest. Mr. Dickson states that it is possible for boys who are willing to work to get a start and earn a living while attending school.

School courses offered here have great practical value for persons intending to specialize in any field of agriculture. Especially valuable for western agriculturalists is the course which covers stock farming and includes genetics and animal hygiene.

## To Win Teaching Requirements

To study for several elementary certificates it is not necessary for a student to go away to school for all four years. By successfully completing the first two years in Junior College, one can enter his chosen outside college with regular junior standing.

Those students who are doing this are urged to follow precisely the requirements laid down by the University of California at Los Angeles, which may be used as a standard, or those of the particular college to which they will later transfer.

For a U. C. L. A. junior certificate in letters and science there are several subjects in which one can major. A few of these are English, mathematics, history, political science, French or Spanish. For each of these majors there are several required subjects and several recommended courses.

## J. C. Heads Greet New Students

### Dean Bird Has Welcome Words

Throughout the State of California during the past few years, increasingly large numbers of high school graduates have been continuing their studies in universities or colleges or junior colleges or business colleges or trade schools. The reasons for doing so are several. Chief among them, probably, are these two:

1. The high school graduate feels that in our complex modern world, there is still too wide a gap between what he has thus far learned and what he will need to know if he is to be able to make adequate adjustments to its problems and if he is to enjoy a satisfactory life on the level he wishes to attain.

2. The high school graduate recognizes that more and more places in business activities and industrial activities are open only to persons who are twenty years of age or more and who have had more general education and more special training than the high school years can give.

What is true throughout the state is true in Bakersfield. A few years ago about thirty per cent of the Kern County Union High School graduates entered junior college. Now more than fifty per cent take advanced study here. And the curve is still rising.

The Bakersfield Junior College takes pleasure in extending an invitation to all seniors to make use of its services and to become part of its happy and enthusiastic student body.

GRACE BIRD, Dean.

### Old Mother Earth Studied In Geology

Considered one of the most comprehensive geology courses offered to any undergraduate, the Bakersfield Junior College year of study is open to any student having at least high school chemistry. During the year, the student covers formations in the earth's crust and paleontology.

The course fits one to go into any special field of geology after prerequisites have been fulfilled. The 1A and 1B units are acceptable in any college or university, upon transfer, toward either elective or major credit.

### Dean Bird

### Psychology—Why We Differ In Thought

Among the many courses offered at Bakersfield Junior College in the department of social science are Introduction to Philosophy and General Psychology, listed in the junior college circular as Philosophy 5A-B and Psychology 1A-B.

The former course, directed by William van Ewert, provides an elementary systematic survey of the history and various schools of philosophy, touching upon phases of logic, theory of knowledge, religion, and ethics. Illustrative readings in the philosophical sources include selections from Plato, Locke, Descartes, James, Dewey, and other recognized authorities.

General Psychology, as offered by J. W. McDaniel, reviews the development of consciousness and behavior with particular attention to concepts of intelligence and emotion. A weekly, three-hour laboratory period is included in the second semester during which experimentation in psychological functions is carried out.

Both courses are accredited in accordance with lower division requirements of University of California.

### Architects Course Is Outlined Briefly

Bakersfield Junior College includes in its curriculum a two-year course in architecture, which is open to a limited and very select group of high school graduates. This fine course includes studies in mathematics, physics, art, foreign languages, and, of course architecture. At the end of

### Student Prexy Invites Grads

Bakersfield Junior College is happy to extend to the graduating high school seniors of the Kern County Union High Schools an invitation to attend our junior college next year. The institution offers a splendid atmosphere of encouragement to all students interested in extra-curricula activities. The repeated accomplishments of the athletic teams have established an attractiveness for participation that is increasing each year. The remarkable achievements of the forensics department, in addition to the personal enjoyment of the forensic students in their extra-curricula work, has insured the speech activities of a prominent position on our campus. The unique presentation of "Yellow Jack" by the drama department has firmly fixed the outstanding position of the dramatic activities. These represent only a portion of the activities of the student body at large.

By participation in student self-government and extra-curricula activities the student is developing one of the most valuable and most needed traits—leadership. One-half of the students enrolled in Bakersfield Junior College will some day be leaders in their community. It is for this reason that we encourage and foster participation in these fruitful fields of endeavor.

Come to Bakersfield Junior College and participate in our extra-curricula activities. You will be doing us a favor, and the benefits that you derive will more than repay you for the time spent in the campus activities.

ROBERT MOON,  
President Associated Students of  
Bakersfield Junior College.

the two years the student will graduate from junior college and will then enter the university of his choice as a junior, provided, of course, that the professors at B. J. C. consent to give passing grades in all the subjects. However, fine young students will have absolutely no difficulty in getting straight "A's."

Students in the school of architecture must have completed in high school four units of mathematics, physics or chemistry, geometrical drawing, and two years of a foreign language.

## THE 1935-36 COLLEGE PAPER

I duly appreciate the honor which the student body has paid me by placing in my hands the editorship of the college paper. The increasing responsibilities of such a position under our newly revised constitution are apparent.

Our job is to present an intelligent, modern, and competent account of collegiate affairs. This can only be accomplished by whole-hearted cooperation and tireless effort. Efficiency must guide our attempts, and unselfishness must motivate every step undertaken. Past incompetency and mismanagement can be remedied in no other way. Consequently we must appeal to the student body for loyal support.

No one individual or group of individuals shall be judge of our achievements—nor shall they guide our actions. The paper must be upheld and must maintain the high standards which characterize every undertaking of the Bakersfield Junior College. Greater school spirit, a more competent student government, and sincere effort must mark our progress during the coming year.

To aid in the gaining of these ends, the Renegade strives to present interesting, intelligent, and accurate accounts of the activities on this campus.

We hope that our ambitions meet with your approval and will secure your support. To a greater B. J. C. we give you the Renegade Rip.

MAURY BAKER, Editor-Elect of the Renegade Rip.

## LIFE SCIENCES OFFER FUTURE EMPLOYMENT

Is your life work sciences? For the benefit to students majoring in this field of endeavor, the curriculum of Bakersfield Junior College offers nearly complete lower division courses for bacteriology and anatomy majors, and complete lower division courses for botany, physiology, and zoology majors.

For those interested in a major in bacteriology, B. J. C. offers: Chemistry 1A-B, a course in general bacteriology given during the second semester; botany 2A-B, a course in general botany; physics 2A-B, a course in general physics; French; German, and a course in elementary zoology, zoology 1A-B. These courses, which constitute the entire lower division requirements for a major in bacteriology, are given without laboratory fees, and without the purchase of books, which are a large item of expense in most junior colleges and colleges.

### Anatomy and Botany

In the field of anatomy, an elemen-

tary course in general anatomy is given in addition to the above listed sciences.

In the field of botany, the lower division courses may be completed at B. J. C. In addition to these requirements, a course in the classification of flowering plants is offered under the title of botany 4.

For those interested in the field of physiology, complete lower division work is also offered. A first course in physiology is added to the other sciences quoted for students majoring in this field.

For students majoring in zoology, the lower division requirements may also be absorbed at B. J. C. In addition to the regular lower division zoology requirements, a course in general biology, zoology 10 is included.

### Cheaper Rates

Several reasons for attendance at B. J. C. could be advanced, but in order to finish this already too long treatise, only two will be advanced. First, practically all lower division courses in all branches of the life sciences are offered at B. J. C. Second, as there are no lab. fees or book purchases required, B. J. C. is one of the most economical educational institutions of its kind in the state.

## Social Life Open To All With Student Body Cards

By BERERLY WESTON

"Don't let them fool you, newcomers, there are plenty of things to do besides study, in the Bakersfield Junior College. For verification, ask any of the inmates of this scholarly (?) institution. Now that your commentator is leaving the portals of this great edifice, (Editor's note: 'We Hlope'), she will dry her tears and offer her successors some timely advice, (which is about all she can

"Now, if you are hey-hey type, then patronize dances because they are the nucleus of entertainment offered for studes, and they will divert your mind from such prosaic things as Hamlet's soliloquy, and abnormal psychology of the introvert. (Pause while the writer dodges a few books hurled from her illustrious instructors; after all, the finals are still to come, maybe I'd better retract that). Anyhoo, to return to the torso-swinging activity, if you can do all the new steps and survive with only minor injuries, you've got what it takes, (if you haven't, use wooden shoes, and hope your partner breaks an arch the next time he roosts on one of your persecuted pedals).

"Now, for individuals who do not like such strenuous activity, there are various clubs that are open to membership—if you possess certain qualifications. We haven't time to enumerate these but maybe we'd better. Most of the language organizations will receive all students taking the particular language they represent. Of course there are honor societies but we are speaking to the great majority so pass lightly on.

"If you are one of those beefy guys,

football is just the thing for you. To be a college football hero is really something, you thrill to the cheers of the crowd and wish the daddburned coach would stop making you wear cavities on the top of the bench.

"If you are the prolific speaker type, which is a more dignified way of signifying chatterbox, you had better confine your verbal activities to forensic contests. For experience, you will find any number of amateur windbags in the study (what irony) hall.

"If you are one of those emotional people, stop giving your friends the jitters and let the dramatics instructor mold those visceral outbursts into something that will benefit an audience. Maybe, if you're good, you can work up to playing one of Eliza's bloodhounds crossing the ice, or, if you are one of those white corpus-cled, cold people, you can play the ice.

"If you are one of those eccentrics who thrive in disorderly surroundings, join the Renegade Rig, the local 'nuwspuppa', and in the publication office you will be perfectly at home.

"All these events are open to your pleasure, if you will only buy a student body card. The card entitles you to all things aforementioned, and it only costs the paltry sum of ten smackers (pally, but try to borrow it sometime). Well, youngsters, if you are a student body member you will be able to participate in all these unlimited fields of endeavor and it is up to your school spirit to purchase one of these tickets to brotherhood and social life. Ahmen.

"P. S. If you don't dig up and buy one, you're a heel!"

tion with the Patrons' Club for the same purpose.

Besides these two affairs, the Association usually sponsors one big event each semester in which both freshmen and sophomore women take part. This entertainment is presented purely for enjoyment.

Each year the A. W. S. sends representatives to an annual convention. These representatives are usually chosen from among the organization's staff of officers, which is made up of a president, vice president, treasurer, secretary, and publicity manager. Chairman of the various committees are appointed by the officers.

No qualifications or due are necessary for membership. Money for necessary expenses is contributed by the student body, in the form of an annual \$75.00 donation.

Mrs. Hazel C. Aldrich, head of the women's physical education department, fills the position of adviser for the organization.

## Extensive Business Training Offered

In the field of business training, the Junior College Department of Commerce has courses which lead to advanced standing in universities and colleges, and other courses which prepare for skills to be practiced in business activities directly upon their mastery in the junior college.

In the first place, business education is fundamentally a program of economic education that has to do with the acquisition, conservation, and spending of wealth. There is a business side to every part of life, agriculture, engineering, law, medicine, and art.

There are two objectives stressed in business education in junior college: First, to offer one or two years of regular lower division collegiate work; and second, to offer one or two years of terminal work. This latter type of work takes care of the student who does not go beyond junior college.

Because the student does not wish to transfer to a four-year college, he has a wider latitude in the selection of his subjects, for he is not confined to the special requirements for upper division work.

One of the most important subjects in the Commerce Department is accounting. In accounting the student is instructed in the theory and practice of simple books of record, the opening of books for a new business; the making of financial statements, and other tasks in the way of keeping books. Credit for the course in accounting is transferable to a four year college, leading to advanced accounting practice. It also forms an opening wedge for the student who intends to leave school after two years.

Business law, a transferable subject, is correlated with accounting, touching on various points encountered in everyday business.

Business mathematics falls in the field of business and is offered in junior college solely as a review of business arithmetic. It is necessary for making financial statements. A most important phase of the business education is a study of business management. It does not grant college transfer credit, but it does offer a great deal of value to students wishing to pursue at college such subjects as marketing, merchandising, advertising, salesmanship, and industrial economics.

### AUTO MECHANICS

Mechanically minded students who desire immediate employment are urged to join the auto trade class under the instruction of R. J. Cross. Training is given under actual garage conditions for speedy entry into the mechanical field. Mr. Cross states that there is a big call for these students who are in school simply to get a job.

## A.M.S. Is Open To All Men Students

Maintaining a great and active part on the year's school calendar, the Associated Men Students is an organization to which all men students of the junior college are automatically made members.

Like the A. W. S. it attempts to create closer contact among the members, support various activities of its own, and also support general student activities of the campus. As a good example, the A. M. S. helped toward payment of gold basketballs presented to outstanding members on the team.

Several get-togethers feature the activities at large. This year at different meetings special speakers were presented, and motion pictures also formed a highlight. An event looked forward to by all members is the grand annual stag picnic at some chosen site near Bakersfield, usually the Kern river.

During football, basketball and track season, the organization promotes increased enthusiasm among the students in jaysee together with outside supporters. Pep rallies, publicity, and publicity stunts are means by which the A. M. S. produces this pepped-up spirit during these various sport seasons.

## Dramatics Offers Plenty Of Practice

Valuable to any liberal arts student is the training offered by Public Speaking 10A-B, an accredited lower division course devoted to the study of drama.

Supervised by Miss Ethel Robinson, director of a score of amateur theatrical successes at Bakersfield Junior College and Kern County High School, this course is designed to present in interesting and understandable form the elements of theory and technique of acting with special attention to diction, reading, poise and character portrayal.

Besides the student direction, and production of a series of worthwhile one-acts in class, an annual three-act student body play is undertaken to which dramatics students are also eligible.

For noteworthy performance in major roles of one or more three-act plays or in three or more one-acts membership may be merited to the Bakersfield Junior College chapter of Delta Psi Omega, national junior college honorary dramatics society, which also stages one full-length and a number of shorter plays during the year.

This is opportunity to study and practice the sciences of drama offered particularly to the student of dramatics.

Rich man, poor man, fraternity brother, fraternity brother.

—Growler.

## Ripping the News

This issue chalks up around 20,000 words worth of pettifogging for "yours balmy." And the Republicans from nine middle-western states are to convene at the Abraham Lincoln tomb in Washington "for inspiration."

If the returns from the last presidential election signifies anything, they need it! Speaking of elections, the 1936 Roosevelt slogan is rumored as: "Save the Country From Radicalism." Persimmons to that governor of a southern state who bombarded the administration's relief policies at the very time that S.E.R.A. was spending \$10,000 to remodel his own state mansion. Now if it had been \$100,000!

The "dated" hot dog has received the government's approval. At least one can consume these delicacies and rest assured that they are premature to the "baking" stage.

The Coolidge "bob" received nearly as much publicity as the famous Pickford "trim."

The guardians to the Dionne "quints" have demanded that a St. Paul concern confiscate over a million calendars bearing a likeness of the "big five."

And with all this mass production, one can't blame the film colony for taking out insurance against such calamities, especially since the Richard Dixes followed up the Crosby's with twins.

The 27-month-old girl that won Texas Better Baby contest had had over 25 hospital operations in the two years previous to the contest.

Helen Keller, famous deaf, blind, and mute, attends the theater regularly. We see that a local funeral parlour is making it possible to die on installments. That mortician might note that the \$1890 funeral bill for the burial of the assassinated President Garfield has never been paid.

It's hard to collect a "dead" debt. And while on the subject, Martha Southwell, lately of London, is boasting the fact that she had two funerals over a half-century apart.

The first time she attracted the priest's attention by tapping on the casket. We would be all for that "prosperity chain," that is, if we were looking for a "strayed relative" or some such thing.

Now that the prices of meat are soaring higher every day, if someone should call us a "pig," we'd consider it a compliment.

Those living down Jastro way are cramming nightly to the tune of the Eagles Drum Corps—bless it.

On the very eve of the day that we were to realize our ambitions of making this school a five-year institution, our triumphant cry was muffled. And as Mr. Tennyson would have it: "I am become a name." Hii!!!

Recently Compton Jaysee had a pioneer day with old time costumes, a qupen and the rest of the old-time trappings. They featured a parade in the afternoon, also an assembly and a ball at night.

## Music Courses Are Popular at B. J. C.

Offering a wide variety of music courses, Bakersfield Junior College presents a number of subjects which are transferable to any college or university. The incoming students has an array of musical courses, any or all of which he may pursue.

Music students who do not wish to take a general course in the department are free to specialize in any of the three specific fields presented.

Music appreciation, which places emphasis on the compositions of the masters, is as valuable to collegians who merely wish to acquire a cultural background as it is to students who will continue their musical work in other colleges or universities.

A course in the principles of music, which teaches the fundamentals of singing, sight-reading, and tone thinking, is also advantageous to either type of student.

Vocal students who have some previous knowledge of the symbols and terminology of musical notation may carry on their work through elementary and advanced harmony courses.

Choral work, which covers only two hours per week, gives students of voice worthwhile training in sight-singing. Although no such organization exists, members of these classes have, at various times, formed quartets, trios, and the like, whose members sing at various gatherings.

Members of the band and orchestra are selected from among students of instrumentation and music classes.

Instrumentation gives training in the theory and practice of reading and writing music, and some training in simple orchestration. With instrumentation as preliminary training students may take music, which consists of six hours work per week in orchestra, band, or string ensemble.

The Junior College string quartet is composed of members chosen from the music class.

Besides offering training for future work, the music courses presented are of value in fitting the student for social life, developing poise and personality.

### ENCOURAGEMENT

"What are my chances of recovery, doctor?"

"One hundred per cent! Medical records show that nine out of ten with the disease you have die. Yours is the tenth case I've treated. The others all died—you're bound to get well." Statistics are statistics.

Barber: Was your tie red when you came in here?  
Sucker: No, it wasn't!  
Barber: Gosh, I must have cut your throat. —Red Cat.

First: And what did Mae West say when you kissed her?  
Second: She told me to call on Friday; that's amateur night. —Old Line.

## INTRODUCING HEAD COACH JACK FROST

Introducing Wallace D. "Jack" Frost, dynamic guider of Renegade football and basketball destinies.

Frost was selected to fill the shoes vacated by "Spud" Harder when that venerable gentleman was elevated to head football coach at Santa Barbara State at the beginning of the 1934 pigskin season.

Frost had previously piloted the Bakersfield high school Sandabs through four years unblemished years of football in which the high school midgets toppled over opponents after opponents and suffered nary a taste of defeat.

Frost took over the J. C. Football reins last year and was presented the task of molding a bunch of eager, unseasoned performers of unknown quantity into a representative squad. The locals started green, but as the season progressed the Renegades improved to such an extent that they became one of the most feared grid-iron machines in the valley. It was a remarkable achievement for Frost when his team came through in such a fine, fighting style.

Then to cap an excellent beginning, Frost developed a brilliant array of court artists into a championship basketball unit—only to drop the play-off bit to Telf in a hotly contested conflict. This year's squad proved to be one of the finest casaba aggregations ever to be turned out by a B. J. C. mentor.

Although marred by some unfavorable breaks, Frost's first year proved to a brilliant one.

Frost's football assistant were Don Robesky, former Stanford all-American guard, and John Clymer.

### Is There A Doctor Present? Why Not?

Intended as a guide to the student who intends to follow medicine or any of its branches, the pre-medical course of study as presented here is held to be most comprehensive. It features such subjects as zoology, physics, chemistry, foreign language and English.

The student who desires to attend a medical school or to have a broad scientific background will find that the Bakersfield Jaycee pre-med. program answers his needs. Over the two-year period, he fulfills, besides the normal requirements for entry to any first-class medical school, the courses necessary for the Junior Certificates in the College of Letters and Science. This means that if he changes his mind, he is still acceptable to any university as a candidate for the A. B. degree. His science background will be found of great advantage in any line of work he may decide to take.

Every one of the courses which

### Coach Frost

### Theron Taber

### Track and Field Men Get Credit

One of the major sports in B. J. C. is track, and the past season has been one of the best ever had by the Renegades. Although they were a trifle slow in starting, the Maroon and White finished second in the conference in 1935. Individual performances of such men as Star Croson, Max Shaftrath, and Willis Webb piled up points all season.

Coach P. M. Bliss, Renegade track mentor, did not have a wealth of material this season, but he made the most of it. Croson, in one meet, leaped 6 feet 4 1/2 inches in the high jump and has gone as high as 13 feet in the pole vault. Another outstanding man on the squad is Lawrence Avilez, fast relay member and 440 man. Al "Beans" Vlahakis is also a powerful relay unit and quarter miler.

There are a number of other good members of the squad, but space will not allow a resume of even a part of their case histories. The important thing is the fact that every type of track work is offered by Coach Bliss to the aspiring field or running enthusiast.

make-up the pre-med. program has been carefully selected with the aid of medical schools of the highest standing. This means that the student who has taken his work here may enter the University of California Medical School, U. S. C., or Stanford provided he has a good average in his work.

The junior college preparation for entry to a medical schools includes: two years of chemistry, organic and inorganic; one year of physics with lectures and experimental work on heat, sound, light, and electricity; one year of zoology; one of English and one of foreign language; one year of social science; and regular work in orientation and physical education.

## J. C. Footballers Go Good at College

College coaches prefer football players that have Junior College experience to players that go directly to college and usually spend their freshman year in inactivity due to the keen competition. This was learned from Dean Bird, who conversed with several university coaches recently.

"The same opinion was commonly expressed among the majority of the coaches," Miss Bird declared.

Junior College men received closer individual attention in their first J. C. year than that received by freshman candidates at the universities. The turnout for the freshman squad is usually larger than that for a position on a Jaycee squad; therefore members of a two-year institution usually gain wider experience through the medium of playing regularly.

The Junior College schedules are better founded out and usually contain a greater number of games than the schedules encountered by a freshman squad.

The Junior College player is usually performing with the same players he practiced with in high school, a factor which tends to unify and coordinate his playing.

The only draw-back to Junior College football, as explained by one of the mentors, is that if a university has a freshman star, that player will naturally be out for the varsity the following year, but the university encounters a great deal of trouble trying to lure the services of a J. C. star from the snatchers of another college.

### Women's Sports Are Taken Seriously

Women's sports may not reap as much glory as the men's, but, nevertheless, they play an important part in the schedule of many women students.

Associated football, soccer, volleyball, speedball, basketball, and baseball teams are chosen in their respective seasons. These games are participated in by a large number of women, and the women making the teams enjoy playing for the sake of the sport, with victory or defeat comparatively incidental.

Women making letters or pins feel that they really have accomplished something. After making a team a student is allowed to join the W. A. A., which is the Women's Athletic Association. Each team made allows 10 points, and 45 points must be made before even a felt letter can be earned.

Although tennis is only a voluntary sport, it is one of the most important. This year the team has attained many honors throughout the valley.

Tourist: "Milking the cow?"  
Yokel: "Naw, jus feeling her pulze."  
—Widow.

## Sports Program Made Easier By Two-Year Limit

With the uniform adoption by the Central California Conference of the two-year limit for athletic competition, Bakersfield Junior College will be greatly benefited in its sports program.

B. J. C. has been a strict adherent to the two-year eligibility rule, despite the fact that other conference members have played their athletes an extra year. This situation has, in the past, frequently put the Renegades at a serious disadvantage. B. J. C. offers football, basketball, track, and tennis as major sports, with minor sports of golf, ping pong, and the like.

The Renegade Commissioner of Athletics is Theron Taber, who besides being possessed of marvelous mathematical genius, arranges all athletic schedules.

Football and basketball are coached by "Jack" Frost, while Perc Bliss tutors all the cinder artists. Forrest Lynn, besides teaching the rudiments of technology, finds time to distribute his tennis knowledge to budding Tildens and Vines. Golf is left for the individual to fathom in his own sweet way.

Bakersfield J. C. enters competitive football, basketball, track, and tennis squads in the Central California Conference, of which the leading Junior Colleges of the Southern San Joaquin valley are members. All other sports are inter-school affairs.

According to Mr. Taber, baseball was tried here several years ago, and while much interest was shown in this sport, it was too heavy a burden on the student body purse to be continued.

Some of the non-conference members that B. J. C. encounters in football are Stanford Frosh, Santa Clara Frosh, L. A. J. C., and Cal. Poly., while such teams as Compton, and March Field, non-conference members, are encountered in basketball.

### Stenos Receive All Necessary Courses

Future stenographers and secretaries receive their training for positions at the Bakersfield Junior College from a complete course in all types of office and secretarial work. Any student can acquire enough practical knowledge of business in two years to enable him to start to work immediately following graduation.

B. J. C. offers two years of typing, two years of stenography, one year of accounting, one year of business English, and one year of business law. Students that have majored in secretarial work in high school can be assured that they will graduate from B. J. C. with a more complete knowledge after two years of advanced study.
